**On the Cover:** TgTau<sup>P301L</sup> mice recreate the substantial phenotypic variation and spectrum of pathologies seen in frontotemporal dementia with parkinsonism linked to chromosome 17 (FTDP-17) patients. Dot-like immunoreactivity of hippocampal neurons stained with Tau154 (brown), an antibody specific for human tau protein, in TgTau<sup>P301L</sup> mice at 3 months of age. Sample was counterstained with hematoxylin (blue). (See page 1365)
