

The American Journal of Pathology

Official Journal of the American Society for Investigative Pathology

September 2011 • Volume 179, Number 3

On the Cover: A murine model for subretinal hemorrhage, which recapitulates features of the clinical disease, may be useful for evaluating potential experimental therapies. Histologic section shows a retina at 2 weeks after subretinal blood injection, demonstrating resolution of the hemorrhage and development of outer retinal atrophy (apoptosis, red; nuclei, blue). (See page 1265.)

▼ **CME Accreditation statement:** This journal-based CME activity ("ASIP 2011 Journal CME Program: AJP 2011 CME Program in Pathogenesis") has been planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint sponsorship of the Federation of American Societies for Experimental Biology (FASEB) and the American Society for Investigative Pathology (ASIP). FASEB is accredited by the ACCME to provide continuing medical education for physicians.

FASEB designates this journal-based CME activity for a maximum of *50 AMA PRA Category 1 Credit(s)*[™]. Physicians should only claim credit commensurate with the extent of their participation in the activity.
