

The American Journal of Pathology

Official Journal of the American Society for Investigative Pathology

November 2012 • Volume 181, Number 5

On the Cover: Photomicrograph of FITC-cholera toxin-B–labeled PC-3 prostate cancer cells showing bulbous membrane protrusions and several large microvesicles, or oncosomes, derived from them and released into the surrounding environment. These are features of the amoeboid tumor cell phenotype, which appears to reflect aggressive disease *in vivo*. (See page 1573.)

ASIP Semiannual 2012/2 AJP CME Program in Pathogenesis appears online. See <http://www.asip.org/CME/journalCME.htm> for educational goals, registration, and examination details. The planning committee members and staff have no relevant financial relationships with commercial interest to disclose. Relevant financial relationships of the authors of selected articles in this journal-based CME activity will be disclosed in a footnote to the published article and in each journal CME examination. See below for CME accreditation statement.

CME Accreditation statement: This activity ("ASIP Semiannual 2012/2 AJP CME Program in Pathogenesis") has been planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint sponsorship of the American Society for Clinical Pathology (ASCP) and the American Society for Investigative Pathology (ASIP). ASCP is accredited by the ACCME to provide continuing medical education for physicians.

The ASCP designates this journal-based CME activity ("ASIP Semiannual 2012/2 AJP CME Program in Pathogenesis") for a maximum of 24 AMA PRA Category 1 Credit(s)[™]. Physicians should only claim credit commensurate with the extent of their participation in the activity.
