PATHOLOGY

Cellular and Molecular Biology of Disease

Table of Contents

October 2014

Volume 184

Number 10

On the Cover: Glycogen synthase kinase 3 β (GSK3b) regulates paxillin phosphorylation in podocytes and determines the ensuing focal adhesion dynamics. Forced expression of a dominant negative kinase dead (KD) mutant of GSK3b or treatment with lithium diminishes doxorubicin-elicited podocyte injury. Expression of F-actin (red) and paxillin (green) in normal podocytes overexpressing KD mutant GSK3b is shown. Nuclei are stained with DAPI (blue). (See page 2742.)

2597 This Month in AJP

Review

2598 Stromal Androgen Receptor in Prostate Development and Cancer

Mandeep Singh, Ruchi Jha, Jonathan Melamed, Ellen Shapiro, Simon W. Hayward, and Peng Lee

Commentary

2608 Fusing Transcriptomics to Progressive Prostate Cancer

Masaya Jimbo, Karen E. Knudsen, and Jonathan R. Brody

★ Related article appears on page 2840.

Short Communications

2611 Transforming Growth Factor- β —Independent Role of Connective Tissue Growth Factor in the Development of Liver Fibrosis

Keiko Sakai, Safdar Jawaid, Takako Sasaki, George Bou-Gharios, and Takao Sakai

2618 Retinal Microangiopathy in a Mouse Model of Inducible Mural Cell Loss

Cammi N. Valdez, Joseph F. Arboleda-Velasquez, Dhanesh S. Amarnani, Leo A. Kim, and Patricia A. D'Amore

Regular Articles

Animal Models

2627 IL-10, IL-4, and STAT6 Promote an M2 Milieu Required for Termination of PO₁₀₆₋₁₂₅-Induced Murine Experimental Autoimmune Neuritis

Anna Brunn, Mirna Mihelcic, Mariana Carstov, Lea Hummel, Frank Geier, Annika Schmidt, Lisa Saupe, Olaf Utermöhlen, and Martina Deckert

2641 Mutations in Pre-mRNA Processing Factors 3, 8, and 31 Cause Dysfunction of the Retinal Pigment Epithelium

Michael H. Farkas, Deborah S. Lew, Maria E. Sousa, Kinga Bujakowska, Jonathan Chatagnon, Shomi S. Bhattacharya, Eric A. Pierce, and Emeline F. Nandrot

2653 Silencing of *drpr* Leads to Muscle and Brain Degeneration in Adult *Drosophila*

Isabelle Draper, Lane J. Mahoney, Satomi Mitsuhashi, Christina A. Pacak, Robert N. Salomon, and Peter B. Kang

2662 The Impact of Type 1 Diabetes Mellitus on Corneal Epithelial Nerve Morphology and the Corneal Epithelium

Daniel Cai, Meifang Zhu, W. Matthew Petroll, Vindhya Koppaka, and Danielle M. Robertson

Biomarkers, Genomics, Proteomics, and Gene Regulation

- 2671** Single-Cell Genetic Analysis Reveals Insights into Clonal Development of Prostate Cancers and Indicates Loss of *PTEN* as a Marker of Poor Prognosis
Kerstin M. Heselmeier-Haddad, Lissa Y. Berroa Garcia, Amanda Bradley, Leanora Hernandez, Yue Hu, Jens K. Habermann, Christoph Dumke, Christoph Thorns, Sven Perner, Ekaterina Pestova, Catherine Burke, Salim A. Chowdhury, Russell Schwartz, Alejandro A. Schäffer, Pamela L. Paris, and Thomas Ried

Cardiovascular, Pulmonary, and Renal Pathology

- 2687** Thrombospondin-1 Deficiency Causes a Shift from Fibroproliferative to Inflammatory Kidney Disease and Delays Onset of Renal Failure
Michael Zeisberg, Björn Tampe, Valerie LeBleu, Desiree Tampe, Elisabeth M. Zeisberg, and Raghu Kalluri
- 2699** MAGI-2 Is Critical for the Formation and Maintenance of the Glomerular Filtration Barrier in Mouse Kidney

ASIP 2014 AJP CME Program in Pathogenesis appears online. For details about objectives, educational goals, registration, and required examination, see <http://www.asip.org/CME/index.cfm>. The planning committee members and staff have no relevant financial relationships with commercial interest to disclose. Financial relationships (including the name of the commercial entity and the nature of the relationship) of the authors of selected articles in this journal-based CME activity will be disclosed in the published article and in each journal CME examination. See below for CME accreditation statement.

Objectives: Upon completion of this journal-based CME activity you will be able to:

- discuss the research underway and/or current molecular approaches to decipher the pathogenesis of disease.
- demonstrate a gained level of knowledge of the methods and techniques being used by researchers and practitioners.
- understand the link between pathogenesis and the development of new diagnostic, prognostic, and therapeutic approaches to infectious diseases, inherited diseases and syndromes, and to acquired diseases and syndromes spanning systems biology.

The ASIP 2014 AJP CME Program in Pathogenesis qualifies as an American Board of Pathology Maintenance of Certification Part II Self-Assessment Module (SAM). For details, see <http://www.asip.org/CME/index.cfm>.

 denotes participating articles in this issue

 **CME Accreditation Statement:** This activity ("ASIP 2014 AJP CME Program in Pathogenesis") has been planned and implemented in accordance with the Essential Areas and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint sponsorship of the American Society for Clinical Pathology (ASCP) and the American Society for Investigative Pathology (ASIP). ASCP is accredited by the ACCME to provide continuing medical education for physicians.

The ASCP designates this journal-based CME activity ("ASIP 2014 AJP CME Program in Pathogenesis") for a maximum of 48 *AMA PRA Category 1 Credit(s)*[™]. Physicians should only claim credit commensurate with the extent of their participation in the activity.
