The American Journal of PATHOLOGY

Cellular and Molecular Biology of Disease

Editor-in-Chief
Kevin A. Roth, University of Alabama at Birmingham

Senior Associate Editor
Martha B. Furie, Stony Brook University

Senior Assistant Editors
John C. Chatham, University of Alabama at Birmingham
Robin G. Lorenz, University of Alabama at Birmingham

Associate Editors
Chris Albanese, Georgetown University Medical Center
Vincent Castronovo, University of Liege
William B. Coleman, University of North Carolina Chapel Hill
Zoran Culig, Medical University of Innsbruck
Patricia A. D’Amore, Schepens Eye Research Institute
Lora Hedrick Ellenson, Cornell University
Philippe G. Frank, The University of Tours
Matthew P. Frosh, Massachusetts General Hospital
Philip Furmanski, Rutgers University
Nisha Jan Garg, University of Texas Medical Branch
Michael S. Goligorsky, New York Medical College
Meera Hameed, Indiana University School of Medicine
Shin’ichi Takeda, Charles A. Parkos, University of Michigan
Yasunori Okada, David J. Nikolic-Paterson, Monash Medical Center
Satdarshan (Paul) Singh Monga, Tulane University
Andrew A. Lackner, Christopher G. Kevil, Memorial Sloan-Kettering Cancer Center
Meera Hameed, Indiana University School of Medicine
Jouni Uitto, Thomas Jefferson University
Juliette Uitto, University of North Carolina Chapel Hill
William B. Coleman, University of Liege
Vincent Castronovo, University of Liege

Managing Editor
Audra E. Cox, PhD, ELS

Assistant Managing Editor
Emily H Essex

Production Editor
Henry L. Carter, Jr.

Scientific Editor
Chhavi Chauhan, PhD

Editorial Assistants
Michael Dustin (Sr.), Angela L. Schmeckebier (Birmingham), R. Jenny Takacs

The official journal of the American Society for Investigative Pathology, published by Elsevier, Inc., seeks to publish high-quality, original papers on the cellular and molecular biology of disease. The editors accept manuscripts that advance basic and translational knowledge of the pathogenesis, classification, diagnosis, and mechanisms of disease, without preference for a specific analytic method. High priority is given to studies on human disease and relevant experimental models using cellular, molecular, animal, biological, chemical, and immunological approaches in conjunction with morphology.
