Supplemental Figure S2. Additional phenotypic features of decidual DC-SIGN⁺ APCs. (A) Dot plot showing CD14⁺DC-SIGN⁺ APCs has significantly less CD14 expression compared to CD14⁻DC-SIGN⁻ APCs. Paired t-test was used for calculation of statistical significance. (B) Representative flow cytometry plots showing CCR7 expression by CD14⁺DC-SIGN⁺ APCs (C) dot plot showing no significant difference in the percentage of DC-SIGN⁺ cells within CD14⁺ cells between healthy pregnancy and preeclampsia. Unpaired t-test was used for calculation of statistical significance.
