Supplemental Figure S2. A: Flow chart representation of the structure of the main IHC/histology classifier as used when applied to an unknown sample. B: Variant classifiers including additional marker CCND1 (TCS) arrived at by relaxing the p-value from multiple logistic regression to P=0.01. C: Variant classifier including additional markers CCND1 (TCS) and MKI67 (% positive tumor cells) arrived at by relaxing the p-value from multiple logistic regression to 0.05.
