Supplemental Figure S4.
Supplemental Figure S4. Right ventricle vascular and nuclear density was not different between uninfected and infected animals. Stereologic analysis of right ventricle vasculature using *B. Simplicifolia* lectin to identify vessels (A) and analysis of nuclei using DAPI (B) did not demonstrate a statistically significant difference in either vascular density or nuclear density between groups. Representative images are shown. (3 - 5 animals per group; vascular density ANOVA p = 0.18; nuclear density ANOVA p = 0.053; all scale bars are 50um.)
